

PRODUCT INFORMATION

R.V. Jack Pads

Light Duty for All Recreational Vehicles

12x12x0.75"

RV Jack Pads Provide Piece of Mind

RV Jack Pads provide piece of mind to travelers towing trailers and recreational vehicles. Jack damage caused by soft asphalt, soil and concrete is prevented, even on compressive loads up to 2500 pounds per square inch.

Jack pads provide both absorption of vibration and insulation from the ground. Minor imperfections in the ground are not an issue as Interstate Plastics Light Duty Jack Pads conform to the imperfections in the ground, giving you a stable vibration-reducing platform to jack your trailer or RV on. Maximum weight capacities are fit for almost every recreational vehicle in production. Light Duty RV Jack Pads from Interstate Plastics will exceed your needs.

The Interstate Plastics Advantage

Outrigger and Jack Pads made from plywood tend to splinter, can rot over time, hold moisture and need to be replaced more often than our RV Jack Pads. Steel and aluminum pads are heavy, corrode, discolor, are difficult to replace and expensive to purchase and maintain.

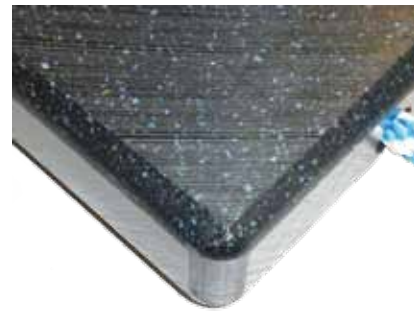

Interstate Plastics Light Duty RV Jack pads are specially formulated from a UHMW base composite. Our pads work across a wide range of temperatures, are virtually unbreakable, waterproof, won't rust, and are extremely easy to clean. Interstate Plastics RV Jack Pads can handle compressive loads from just about any RV on the road.

Features & Specifications

- Waterproof
- Will Not Rust
- Easy to Mount and Replace
- Reduced Downtime
- 15% the Weight of Steel
- Chemically Inert
- Operable from 180F to -250F
- Easy to Clean
- Portable and Safe Load Distribution
- Ergonomic Safety for RV Operators
- Smooth Rounded Edge and Corner Design
- Virtually Unbreakable
- 1x1' Surface Area

12x12x0.75" Light Duty RV Jack Pad

Standard color is Black. Features rope handles for easy carrying.
